

INSTRUMENTATION FOR OFFSHORE PLATFORMS AND FPSOs

Instrumentation Systems for Offshore Installations

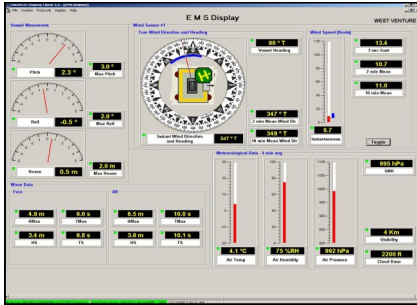

WISE Group can deliver a comprehensive range of instrumentation and systems suitable for use on Offshore installations:

- Environmental Monitoring Systems
- Meteorological and Oceanographic sensors and systems
- Current Profiling Systems
- Weather stations
- Helideck Monitoring Systems to comply with CAP 437
- Motion and Vibration monitoring sensors and systems
- Dynamic Impact Monitoring Systems
- Structural Strain Monitoring Systems
- Condition Monitoring and Integrated Asset Integrity Monitoring Systems
- Data loggers and data acquisition systems
- SCADA systems
- Navigational aids
- Power supply packages for unmanned offshore installations

Environmental/Helideck Monitoring Systems

Often known as EMS / HMS systems, Weather Stations or Metocean systems are a very important tool for weather-critical operations onshore and offshore. These systems are often combined with monitoring Motions, Vibration, Structural Strain or as Integrated Condition Monitoring Systems for total asset integrity monitoring.

Motion Monitoring Systems

We deliver sensors and systems for monitoring 6 DOF for vessels and platforms for a wide variety of offshore applications. This can also include specialized systems for monitoring of dynamic impact and for monitoring seasickness on smaller vessels.

Service work and calibration services (O&M)

We have a qualified team of offshore service engineers, including experienced support engineers onshore, who can undertake service work on all makes and models of Metocean systems, EMP/EMS systems, HMS systems, meteorological and oceanographic sensors, etc. Our workshop is equipped for servicing and calibrating most kinds of sensors and instrumentation.

We can also provide a fast track supply line for spare parts for Metocean systems.

Turn-key instrumentation projects/Project management

We can take full responsibility for all aspects of offshore instrumentation projects from design of the system, engineering, system integration, installation, commissioning to long-term operation, maintenance and data management.
