

# DADAS REAL-TIME DATA ACQUISITION SOFTWARE

DADAS is a very flexible and user friendly real-time data acquisition software that can be configured to a multitude of different applications. DADAS can be used for collecting and processing data, for display and reporting and for controlling other units or processes.

DADAS is very flexible to modify or expand and further inputs and outputs can be added or changed very easily whenever required. Data displays can be designed and configured according to the clients specific needs. A large number of display pages showing data combinations, graphical and history presentation and other information can be set up.

Data can easily be interchanged with other systems, specific data outputs can be configured to local and remote users. Data can be sent to remote users through a wide variety of data transfer methods, data lines, SMS or email reports or web pages.

Please contact A+D to discuss specific applications or solutions.
