

## **DADAS - REPORTING MODULE**

## **DADAS Reporting Module**

A powerful reporting module can be added to the DADAS software in order to generate automatic or semi-automatic reports from a working system. Data can be sent as raw data or processed to standardized formats. Graphical elements can be added such as history graphs or other time series data.

Reports can be generated in any standard format (Word/Excel/Pdf/etc.) and sent by file transfer, email or SMS.

Automatic reporting or data transfer in ASCII, MODBUS, SNMP or similar formats are available. Special formats such as METAR, SYNOP and SPECI can also be implemented.
